FOREWORD

This is the sixth in the series of the publication titied World Weather Records. The earlier issues, which included climatological information through 1960, have had global distribution and have been widely used for meteorological and climatological research. This volume provides data for West Indies, South and Central America for the 1961–70 period.

At its Sixth Session in Bad Homburg, Federal Republic of Germany, in October 1973, the Commission for Special Applications of Meteorology and Climatology (CoSAMC) of the World Meteorological Organization, in Resolution 7, accepted the offer of the United States to publish the "World Weather Records, 1961–70." The United States agreed to collect and edit the 1961–70 data for Region IV (North America). It was suggested that Regional Associations I, II, III, V, and VI arrange in the most suitable way within each Region for the collection and preparation for publication of the data in the "World Weather Records, 1961–70".

The United States extends its gratitude to the meteorological services and other organizations who graciously supplied data and particularly to the Argentine Meteorological Service for acting as data collector for Region III. The United States collected data for Region IV. The present volume for West Indies, South and Central America contains data for all areas included in previous issues of World Weather Records.

WORLD WEATHER RECORDS

EDITORIAL NOTES

This issue of the World Weather Records is primarily concerned with data for 1961–70. As in previous issues, data for earlier years have been included when appropriate and available. The first issue included data from earliest records available at that time up to 1920. Data for periods 1921–1930, 1931–1940, 1941–1950, 1951–1960 were published in succeeding issues. The present volumes continue, insofar as possible, the record of monthly mean values of station pressure, sea level pressure, temperature, and monthly total precipitation for stations listed in previous volumes. New stations are also included when data were available.

Information concerning the exposure of instruments, hours of observation, and methods of adjusting or correcting observational data has been included in station notes whenever it was supplied.

SOURCES OF DATA

Unless otherwise stated in the station notes, data were supplied to the Regional collector by national meteorological services whose addresses may be found in publications of the World Meteorological Organization. The data have been published as received by the United States from the Regional collector. CLINO data are long term means taken from the World Meteorological Organization publication, Climatological Normals (CLINO) WMO/OMM-No. 117 T.P. 52 or are values supplied by the respective authorities.

GROUPING OF STATIONS AND ARRANGEMENT OF DATA

The six volumes of the World Weather Records have been so arranged as to provide a natural geographic separation into what are essentially units of a single continent. Two of the volumes, however, contain island and Ocean Weather Station data as well as those of the smaller continents. Insofar as possible the National Climatic Center has also drawn upon the World Meteorological Organization structure for guidance For example, Israel and Jordan, which are Members of the World Meteorological Organization Region VI – Europe, appear in the volume for Europe.

Within each volume the data are presented alphabetically by station within geographic areas which usually, but not necessarily, coincide with political entities.

Two indexes have been included in the rear of this volume to locate desired information. The first is a master list of all locations (station or area) included in this volume, listed alphabetically without regard to geographical division or country. In the second index, station names are listed in alphabetical order for each major geographical area or country.

The data tables for each station are headed with the station name, the geographic subdivision or country name, the WMO number wherever one has been assigned, the latitude, longitude, and the station height above mean sea level. Unless otherwise noted in the station notes, the information presented in the table headings were those in use at the close of the period for which data are published. Also included in the headings are the page numbers where the station notes are located.

Several newly independent nations now have different names. Since the data refer to the previous regime, the former country name has been used. The current name is indicated in parentheses in the station notes and table headings.

ADJUSTMENTS FOR HOMOGENEITY

World Weather Records published after the 1941-50 issue have not provided for homogeneity of records by adjusting the most recent period to the earlier period. In the 1951-60 volume and this volume, data have been published as received. No attempt has been made to correct for relocation of stations or changes in instrumentation or procedures. Any factors which might affect the homogeneity of the record have been included in the station notes whenever supplied.

CONVERSION OF UNITS

The data are presented in metric units as received.

The totals of precipitation are understood to include all forms of precipitation: rain, snow, sleet, hail, etc. The letter "T" denotes an amount of precipitation more than zero but less than one-half millimeter.

METHODS OF AVERAGING

Unless otherwise described in the station notes, monthly period means are the sums of the monthly means divided by the number of years for which data are available. Five or more years of monthly means are required for computation of monthly period means. Annual means of pressure and temperature are one-twelfth (1/12) of the monthly or period means.

UNITS IN STATION NOTES

The units of height and and distance used in the station notes are those furnished by the respective countries and are metric.

ABBREVIATIONS AND SYMBOLS

H_p : Height (above mean sea level) to which station pressure shown in this volume has been reduced. If different heights have been used for different periods, the information is contained in Station Notes.

H_z : Height of the barometer above mean sea level for the period shown.

H : Height of the ground at the station above mean sea level.

h_t : Height of the thermometer above ground.

h_r : Height of the rim of the precipitation gauge above ground.

Lat : Latitude of the station.

Long : Longitude of the station.

E : Data have been estimated by the method described in Station Notes for that station, or based on incomplete data, or are uncertain for some other reason.

SOUTH AND CENTRAL AMERICA

STATION NOTES

WEST INDIES, SOUTH AND CENTRAL AMERICA

STATION NOTES

ARGENTINA (51 stations)

General:

Station names, elevations, and coordinates were supplied by the National Meteorological Service of Argentina and were in use at the close of 1970. All observation hours correspond to the 60 degree West Meridian. Thermometer and rain gauge heights were 1.5 meters above the surface at all stations. There were no reported station moves.

Pressure and Temperature:

Monthly means of temperature and pressure for permament observation sites were calculated by the equation:

1/4(0200 + 0800 + 1400 + 2000)hours

For stations in the following tables, monthly means were computed by:

1/3(0800 + 1400 + 2000)hours + C

where C represents a correction factor.

WORLD WEATHER RECORDS

STATION NOTES

BAHAMAS (3 stations)

General:

Monthly means are shown in the data tables only when not more than five days observations were missing for the month. Rainfall for the month was the total commencing at 1200 GMT on the first day of the month.

Abraham Bay, Mayaguana:

Sea level pressure was the mean of three observations at 0000, 1200, and 1800 GMT. Temperature was the mean of the average daily maximum and minimum values. Barometer height was 3 meters.

Freeport Airport, Grand Bahama:

Meteorological observations commenced in February 1966, but pressure records were not in available form until January 1968. Sea level pressure was the mean of three observations at 0000, 1200, and 1800 GMT. Temperature was the mean of the average daily maximum and minimum values. Barometer height was 7 meters.

Nassau Airport, New Providence:

Sea level pressure and temperature were the means of eight 3-hourly observations. Barometer height was 7 meters.

WEST INDIES, SOUTH AND CENTRAL AMERICA

STATION NOTES

BARBADOS (1 station)

General:

Data, location, and elevation were supplied by the Barbados Meteorological Service. The station was renamed Grantley Adams International Airport in November 1976.

BERMUDA (1 station)

General:

Station name, elevation, and coordinates were obtained from archives at the National Climitic Center, Asheville, NC (United States). Prior to 1 July 1970, the station was known as Kindley Air Force Base. The rain gauge was a ML-17, and temperature was measured by a TMQ-11.

BOLIVIA (19 stations)

General:

Data for this country were obtained from the "World Monthly Surface Station Climatology", National Center for Atmospheric Research, Boulder CO. (United States). Station notes were not available.

STATION NOTES

BRAZIL (21 stations)

General:

Station names, elevations, and coordinates given in the table headings were in use at the close of 1970. The elevations in the table headings are the heights above mean sea level to which station pressure were reduced (Hp).

Station Histories:

Station Name	WMO Number	Dates

STATION NOTES

BRITISH HONDURAS (BELIZE) (9 stations)

General:

This country became known as Belize in 1973. Notes on the stations follow in alphabetical order. All rain gauges at the following stations were of the daily rain gauge pattern and were 0.3 meters above the ground. Thermometers were in Stevenson Screens 1.2 meters above the ground.

Augustine:

This station was the Forestry Department divisional forest office. It was situated on the western edge of the Maya Mountains at an elevation of 528 meters and was 77 kilometers from the sea. Rainfall readings began in 1949 and observations were made at 0900 and 1500 hours local time.

Belize International Airport:

Station 78583 was at the International Airport and was the first synoptic station established. Readings were started in November 1959 and observations were made daily from 0800 to 1600 hours local time. Pressure figures given were the averages of available hours for each month. The mean temperature was calculated from one-half the sum of the maximum and minimum temperatures. Rainfall was taken from the daily total. The station was located 4.8 kilometers from the sea at an elevation of 5 meters. The barometer height was 12.3 meters.

Central Farm Agricultural Station:

Station 78586 was a government agricultural station 75.6 kilometers from the coast at an elevation of 90 meters. It was situated on the edge of the Belize River basin at the foothills of the Maya Mountains. Rainfall readings were started in 1949 and temperature in 1959. Observation times were 0900 and 1500 hours local time.

Cooma Cairn:

This station was a Forestry Department fire lookout in the Mountain Pine Ridge area. It was 66 kilometers from the sea at an elevation of 560 meters. Rainfall readings began in 1958. Observation times were at 0900 and 1500 hours local time.

Punta Gorda Agricultural Station:

This station was located on the coastal plain in the extreme south of the country. It was situated about 4.8 kilometers inland at an elevations of 6 meters. Rainfall readings began in 1952, but data are only published since 1954. Observation time was 0900 hours local time.

Punta Gorda Town:

This station was located 4.8 kilometers from Punta Gorda Agricultural station.

STATION NOTES

BRITISH HONDURAS (BELIZE) (con.):

Savannah:

Savannah was a Forestry Department fire lookout on the coastal plain of the southern half of the country. It was 6.5 kilometers from the sea at an elevation of about 6 meters. Rainfall observation times were at 0900 and 1500 hours local time and began in 1951.

St. Johns College:

Station 78584 has been situated just north of Belize City at St. John's College, Landivar since 1950. This site is at sea level and only about 275 meters from the sea. Observations were made at 0700 hours local time.

Stann Creek Agricultural Station:

Station 78590 was at Melinda around 9.7 kilometers inland at an elevation of about 6 meters. Observations were taken at 0900 hours local time. Rainfall readings began in 1932 and temperature in 1933.

CHILE (19 stations)

General:

The Punta Galera station appearing in previous issues was discontinued because of lack of data.

Monthly pressure values were computed by the equation:

$$1/3(0800 + 1400 + 2000)h$$

Monthly temperature values were computed by the equation:

$$1/4(0800h + 2000h + max + min)$$

Monthly precipitation values were the total of daily readings at 1200 hours GMT.

STATION NOTES

COLOMBIA (10 stations)

General:

Station names, elevations, and coordinates given in the table headings were supplied by the Colombian Institute of Hydrology, Meteorology, and Land Use and were in use at the close of 1970. The heights of the rain gauges and thermometers were 1 meter and 2 meters above the surface, respectively. The barometer height can be assumed equivalent to the station elevation.

Instrumentation:

Pressure was measured by a Fortin mercury barometer. A mercury thermometer measured temperature. Precipitation values were taken from a Nacional rain gauge and a Hellman rain graph.

Pressure:

The atmospheric pressure was recorded at the station level reduced to 0 degrees C and normal gravity. For stations Blonay, Chinchina, La Florida, La Union, Ospina Perez, and Tibacuy, station pressure was computed by the equation:

1/3(0700 + 1400 + 2000)h local time

For stations Aepto Calipuerto, Aepto Cazadero, Inst Geograf A Codazzi, and Aepto San Andres, station pressure was computed by the equation:

1/3(0700 + 1300 + 1900)h local time

Temperature:

For stations Blonay, Chinchina, La Florida, La Union, Ospina Perez, and Tibacuy, the monthly temperature averages were computed by the equation:

1/4(0700 + 1400 + 2000 + 2000)h local time

For stations Aepto Calipuerto, Aepto Cazadero, Inst Geograf A Codazzi, and Aepto San Andres, the monthly temperature averages were computed by the equation:

1/4(0700 + 1300 + 1900 + 1900)h local time

Precipitation:

The total for a day was the sum of the rainfall readings between 1200 hours of one day and 1200 hours of the following day. The minimum recorded amount was 0.1 millimeters daily.

STATION NOTES

COSTA RICA (4 stations)

General:

Station names, elevations, and coordinates given in the table headings were supplied by the National Institute of Meteorology of Costa Rica. Hourly observations were used in computing mean pressure and temperature. Precipitation was measured daily at 0700 hours local time.

Instrumentation:

At all stations, a Kew-type barometer measured pressure, a mercury-in-glass thermometer and bimetallic thermograph measured temperature, and a Helman type rain gauge recorded precipitation. Rain gauge height was 1.5 meters above the ground at all stations. Thermometer height was 1.5 meters above the ground at Puntarenas and 1.6 meters at both El Coco (Juan Santamaria) and Puerto Limon. Barometer heights were 4 meters above sea level at Puerto Limon, 960 meters at El Coco (Juan Santamaria), and 4 meters at Puntarenas.

CUBA (10 stations)

General:

Except for Guantanamo Bay/NAS, all notes, data, coordinates, and elevations were supplied by the Cuban Institute of Meteorology, Department of Climatology. Guantanamo Bay/NAS was obtained from National Climatic Center (United States) archives.

Guantanamo Bay/NAS:

The station was located on the southeast end of Cuba on the south coast. The bay was encompassed by mountains from the west through north to the east. Observations were taken at the United States Naval Base. Monthly mean temperatures were calculated by one-half the sum of the mean maximum plus mean minimun temperatures. Precipitation was the monthly total.

Habana Observatory Nacional:

The monthly values of pressure and temperature were the mean of 12 daily values (every 2 hours) for the period 1961 throuh 1963. From 1964 to 1970, 24 daily observations were averaged. Precipitation was measured at 1200 hours GMT as a daily total. The thermometer was housed in a screened shelter at a height of 1.5 meters. Barometer height was 51.3 meters.

STATION NOTES

CUBA (con.):

Other stations:

The monthly mean temperatures were calculated by taking one-half the sum of the mean maximum plus mean minimum temperatures. Thermometers were housed in screened shelters at a height of 1.5 meters. Precipitation was measured at 1200 hours GMT as a daily total.

The stations Paso Real De San Diego and Sancti Spiritus were both relocated no more than 3 kilometers in 1968 and 1965, respectively. Their instruments had been on a roof top before relocation. Instruments were located on the roof at Santiago De Cuba/Univ. for the entire period from 1961 to 1970.

DOMINICAN REPUBLIC (27 stations)

General:

Station names, elevations, and coordinates given in the table headings were supplied by the National Meteorological Service of the Dominican Republic and were in use at the close of 1970. The heights of the thermometer, barometer, and rain guage were all 1.5 meters above the surface.

Pressure:

Sea level pressure was expressed in whole millibars and computed using the formula one-half the sum of the maximum and minimum values.

Temperature:

The mean monthly temperature was computed using the formula one-half the sum of the maximum and minimum values.

Precipitation:

Precipitation was measured daily in millimeters and represents the total quantity between 0700 hours local time of one day and 0700 hours of the following day.

STATION NOTES

ECUADOR (19 stations)

General:

Station names, elevations, and coordinates given in the table headings were those in use at the close of 1970. Rain gauge height was 1.2 meters and thermometer height was 2 meters at all stations. Barometer height was the same as the elevation plus 0.4 meters. All observation hours correspond to local Ecuador time.

Instrumentation:

Pressure was measured by an aneroid barometer, barograph or uncovered barometer. Temperature equipment included a complete psychrometer. Precipitation was measured by a rain gauge or rain graph.

In addition, a wide variety of other meteorological measurements were taken at many of these stations.

Pressure:

Mean daily pressure was computed by the equation:

1/3(0700 + 1300 + 1900)h local time

Temperature:

Mean daily temperature was computed by two methods. For stations Banos, Canar, Guayaquil, Isabel Maria, Pichilingue, Portoviejo, Quito, and Tulcan, mean daily temperature was the arithmetic average of the 24 hourly observations. For stations Ancon, Bahia de Caraquez, Cotopaxi, Esmeraldas Tachina, Ibarra, Latacunga, La Toma, Macara, Riobamba, Salinas, and Santo Domingo de los Colorados, the following equation was used:

1/3(0700 + 1300 + 1900)h local time

Precipitation:

Observation times were at local hours 1300, 1900 and 0700 of the next day. Daily values represent the total of these 3 observations. Monthly values represent the total of all daily values.

EL SALVADOR (1 station)

General:

Coordinates and elevation given in the table heading were assumed to be those in use at the close of 1970. The barometer height was 700.8 meters. The heights of rain gauge and thermometer were 1 and 2 meters above the surface, respectively.

STATION NOTES

FRENCH GUIANA (4 stations)

Pressure:

Monthly pressure values were calculated by one-fourth the sum of the average morning maximum, average morning minimum, average evening maximum and average evening minimum pressures. Pressure was reduced to 0 degrees C and correct gravity at the station height.

Temperature:

Monthly temperature values were calculated by one-half the sum of the mean maximum and mean minimum temperatures.

Precipitation:

The monthly totals of rain received were expressed in tenths of millimeters for the decade means and whole millimeters for individual years. A trace of rain was less than 0.1 millimeters.

GRENADA (1 station)

General:

Temperature and precipitation data for Pearl's Airport were supplied by the Caribbean Institute of Meteorology. Pressure data were obtained from the "World Monthly Surface Station Climatology", National Center for Atmospheric Research, Boulder CO. (United States).

GUADELOUPE (1 station)

General:

Data for Raizet were supplied by the Meteorological Service of France. The barometer height was 8.3 meters. CLINO values for temperature, station pressure, and sea level pressure represent the period 1951-70. For precipitation, the CLINO values represent the period 1949-70.

GUATEMALA (1 station)

General:

Data for Guatemala Observatorio were supplied by the National Institude of Seismology, Vulcanology, Meteorology, and Hydrology of Guatemala. The station was established in January 1928.

STATION NOTES

GUYANA (2 stations)

General:

Data for this country were obtained from the "World Monthly Surface Station Climatology", National Center for Atmospheric Research, Boulder CO. (United States). Station notes were not available.

HAITI (10 stations)

General:

Station names, elevations, and coordinates given in the table headings were supplied by the Bureau of Water Resources of Haiti and were in use at the close of 1970. Only precipitation data are printed in this issue. Temperature and pressure measurements were made at some stations but were unavailable in time for publication.

HONDURAS (9 stations)

General:

Monthly data were obtained from the "World Monthly Surface Station Climatology", National Center for Atmospheric Research, Boulder CO. (United States). Station notes and CLINO values were supplied by the National Meteorological Service of Honduras. CLINO values represent means from the beginning of record through 1975.

Station Histories:

Amapala/Los Pelonas:

Station 78700 began operations 22 March 1953 and was located on a pier at the harbor. Instrumentation was that used for a First Order Type "A" Synoptic station.

Catacamas:

Station 78714 intially operated in the Granja Demonstrative School beginning 11 May 1953. The location was about 5 kilometers east southeast of the city. On 24 February 1954 it was transferred to Catacamas Airport. On 17 July 1961, it was again moved (probably within the airport) to a more proper location. Instrumentation was that used for a First Order Type "A" Synoptic station.

STATION NOTES

HONDURAS (con.):

Choluteca:

Station 78724 was located at El Cortijo Airport 2 kilometers southeast of the city. It began operations 1 July 1963 and was equipped as a First Order Type "A" Synoptic station as of 14 December 1969. On 6 August 1965 the station sufferred considerable damage due to a tornado and remained interrupted through much of 1966.

Guanaja:

Station 78701 was located below Alcaldia Municipal between Shin Kay and Hog Kay Keys, about 400 meters southeast of the Island of Guanaja. The station was transferred to Hog Kay on 18 March 1965. On 7 March 1969 and again on 31 October 1969 it was transferred to private homes probably on Hog Kay. Instrumentation was that used for a First Order Type "A" Synoptic station.

La Mesa/San Pedro Sula:

Station 78708 began operations on 29 October 1953 and was located at Barandillas Airport, about 2 kilometers from the center of town. On 9 September 1964 the station was moved to the Air Taxi Terminal. On 11 February 1965, the station was transferred to the new airport at La Mesa. This was about 13 kilometers southeast of the city. Instrumentation was that used for a Synoptic Type "A" station.

Puerto Lempira:

Station 78711 began operations on 7 March 1960 and was located southwest of the school in the city. Instrumentation was that used for a Synoptic Type "B" station.

Santa Rosa de Copan:

Station 78717 was located at the airport, about 2.5 kilometers east of the city. It began operations on 10 October 1952 and was equipped as a Synoptic Type "B" station.

Tegucigalpa/Toncontin Airport:

Station 78720 was located on the third floor of the airport building, 5 kilometers from the city. It began operations on 12 July 1950 and was equipped as a First Order Type "A" station.

Tela:

Station 78706 was located at the airport, 4 kilometers north of the city. Operations began on 19 November 1956. Instrumentation was that used for a Synoptic Type "B" station.

STATION NOTES

JAMAICA (9 stations)

General:

Observations at climatological stations were taken at 0700 and 1500 hours local time. At the synoptic stations, Morant Point Lighthouse, Negril Point Lighthouse, and Palisadoes (Manley International Airport), observation hours were 0700, 1300, and 1900 hours local time.

Pressure:

Atmospheric pressure readings were reduced to mean sea level under conditions of standard temperature and gravity. Mean pressure was compuied using the hours of 0100, 0700, 1300, and 1900 local time.

Temperature:

Daily mean temperature was computed by one-half the sum of the maximum and minimum readings.

Precipitation:

Rainfall was measured at 0700 or 0800 hours local time and assigned to the previous day.

Station Data:

Station Name	Station Height (m)	Barometer Height (m)	ht (m)	hr (m)	Rainfall obs. time
Black River	3	-	-	1.2	0800
Castleton Gardens	229	-	-	0.3	0800
Cinchona Gardens	1492	-	1.2	0.6	0700
Clarks Town	206	-	-	0.9	0800
Mandeville (PWD)	655	-	-	0.3	0700
Morant Point Lighthouse	2	-	1.2	0.6	0700
Negril Point Lighthouse	8	-	1.2	0.6	0700
Palisadoes (Manley) AP	3	13.7	1.2	0.3	0700
Port Antonio	3	-	-	0.9	0700

MARTINIQUE (1 station)

General:

Data for Fort-De-France were supplied by the Meteorological Service of France. The barometer height was 154 meters. CLINO values for station and sea level pressure represent the period 1947-70. For temperature and precipitation, the CLINO values represent the period 1951-70 and 1941-70, respectively.

STATION NOTES

NETHERLANDS ANTILLES (2 stations)

Dr. A. Plesman Airport, Curacao:

Pressure and temperature data were based on hourly observations. Precipitation was measured daily at 0800 hours local time (1200 hours GMT). Effective 1 July 1961, the thermometer screen and unshielded rain gauge were removed from the roof of the terminal building at the airport to a location approximately 400 meters from the north coast and 120 meters south of the middle of the runway. At the same time the mercury thermometer was replaced by a resistance thermograph. Effective 18 February 1964, the barometer was suspended 17.4 meters above MSL in the relocated observation room of the meteorological service. This was in the terminal building at the airport.

Station History:

Prior to 1954 the station was known as Hato Airfield.

Date	H	Hz	ht	hr
01/01/35-31/12/46	8.2 m	-	-	1.0 m
01/01/47-30/06/61	8.2 m	15.6 m	13.0 m	13.0 m
01/07/61-17/02/64	8.2 m	15.6 m	1.8 m	1.0 m
18/02/64-31/12/70	8.2 m	17.4 m	1.8 m	1.0 m

Princess Juliana Airport, St. Maarten:

Pressure and temperature data were the mean of the daily observations at 0800, 1400, and 2000 hours local time (1200, 1800, and 2400 hours GMT). During the period 1965 through 1970, the unavailable 2000 hours local time data were computed by adjusting the 1700 hours local time data with the daily variation over the 4-year period from August 1972 through July 1976. Precipitation was measured daily at 0800 hours local time.

Effective 1 September 1964, the barometer was moved from the former radio office at the airport to the terminal building and suspended 8.8 meters above MSL. Effective 15 May 1969, the thermometer screen and unshielded rain gauge were moved to the roof of the terminal building and the barometer suspended in the tower of the terminal building at 12.1 meters above MSL. At the same time the station elevation was adjusted to the offical aerodome elevation.

Station History:

Date	H	Hz	ht	hr
16/10/52-31/08/64	2.0 m	4.0 m	1.8 m	1.6 m
01/09/64-14/05/69	2.0 m	8.8 m	1.8 m	1.6 m
15/05/69-31/12/70	4.0 m	12.1 m	7.0 m	6.8 m

STATION NOTES

NICARAGUA (1 station)

General:

Data for this country were obtained from the "World Monthly Surface Station Climatology", National Center for Atmospheric Research, Boulder CO. (United States). Station notes were not available.

PANAMA (3 stations)

General:

Data, locations, and elevations were supplied by the Institute of Hydrological and Electrification Resources of Panama. Station Alto Lino was discontinued some years ago.

PARAGUAY (11 stations)

General:

Station names, elevations, and coordinates given in the table headings were supplied by the meteorological authority of Paraguay and were in use at the close of 1970. No variations in elevation and coordinates were reported for these stations except for Puerto Presidente Franco. This station moved in 1965 from coordinates 25 36 S, 54 36 W to 25 32 S, 54 36 W and was renamed Puerto Presidente Stroessner.

Pressure:

Station pressure was corrected to 0 degrees C at the standard gravity at 45 degrees latitude. The equation for monthly mean pressure:

1/3(1200 + 1800 + 2400)h GMT

Temperature:

Monthly temperature values were computed using the equation:

1/3(1200 + 1800 + 2400)h GMT

Precipitation:

Monthly values correspond to the sum of the daily values of precipitation greater than or equal to 0.1 millimeters measured at 1200 hours GMT.

STATION NOTES

PERU (10 stations)

General:

Station names, elevations, and coordinates were supplied by the National Service of Meteorology and Hydrology of Peru and were in use at the close of 1970. From 1961 to 1962, observations were taken at the hours of 0700, 1300, and 1800 local time. From 1963 to 1970, observations were taken at the hours 0700, 1300, and 1900 local time.

Temperature:

Dry bulb thermometers were located at an elevation of 1.6 meters above the surface. Daily averages represent the mean of the 3 observation times.

PUERTO RICO (40 stations)

General:

Station names, elevations and coordinates were obtained from archives at the National Climatic Center, Asheville, NC (United States) and were in use at the end of 1970. All stations were part of the climatic network of the United States.

Temperature:

Monthly mean temperature was calculated by one-half the sum of the mean maximum plus mean minimum values.

Precipitation:

Rainfall values represent the monthly total.

STATION NOTES

SURINAM (13 stations)

General:

Station names, elevations, and coordinates given in the table headings were in use at the close of 1970. Climatological observations used in computing means were at 0800, 1400, and 1800 hours local time.

Pressure:

A standard Kew Pattern mercury barometer was used. The barometer height at Zandery Airport and Paramaribo were 16 and 3 meters above sea level, respectively. Monthly values of pressure were computed using the equation:

1/3 (0800 + 1400 + 1800)h

after all corrections were made for standard conditions and reduction to mean sea level.

Pressure observations were also taken at Coeroeni, Sipaliwini, Stoelmanseiland, and Tafelberg but were omitted due to irregular observation times.

Temperature:

Standard thermometers were housed in Stevenson type screens at a height of 1.5 meters above the ground. Monthly values for all stations were calculated by the equation:

1/3 (0800 + 1400 + 1800)h

Annual means were one-twelfth the sum of the monthly or period means.

Precipitation:

Rainfall was measured with an automatic recorder (Fischer and Porter) at Mooitakki. At all other stations a standard Van Doorn type rain gauge was used. The rim of this collector was 1.5 meters above the ground with the area 4 square decimeters. Precipitation totals were the sums of the daily measurements taken in the morning at 0800 hours local time. Annual values were the sums of the twelve monthly totals or period means. Daily minimum rainfall totals were 1.0 millimeters.

Station Histories:

Apoera:

This station was a settlement located on a riverain of the coastal plain. It was established in 1914 as a rainfall only station. On 11 April 1967, the rain gauge was moved east from coordinates 05 10 N, 57 11 W to 05 11 N, 57 10 W. The elevation changed from 5 to 6 meters.

STATION NOTES

SURINAM (con.):

Benzdorp:

This station was a settlement located on a riverain in a mountainous area. It was established in 1907 as a rainfall only station. The station elevation was 100 meters.

Carl Francois:

This station was a settlement located on a riverain of the coastal plain. It was established in 1924 and recorded only rainfall. The coordinates changed from 05 50 N, 55 46 W during the 1951-60 period to 05 49 N, 55 45 W. The elevation remained unchanged at 2 meters.

Coeroeni:

Station 81253 was an airstrip located on a river island in a mountainous area. It was established on 26 May 1961 as a World Weather Watch Climatological station. Elevation was 150 meters.

Moengo:

Station 81206 was located in a coastal town in hilly countryside. It began in 1918 as a climatological station. The elevation changed from 39 meters to 33 meters at an unknown date during the 1961-70 period.

Mooitakki:

This station was located at Dam near Lake Brokopondo before 1963. When this lake was filled between 1963-64, the site became flooded. Before flooding took place, Mooitakki was established on 1 October 1963 at an elevation of 55 meters above mean sea level and only tenths of a kilometer southeast of the previous location at Dam. The present site is lakeside in hilly terrain.

Nickerie Airport:

Station 81202 was located in a suburban area near the sea at an elevation of 3 meters. It was established in 1956 as a World Weather Watch Climatological station.

Paramaribo:

Station 81201 was in a city location near a river on the coastal plain. It was established in 1852 as a climatological station. The elevation was 2 meters. Coordinates changed from 05 50 N, 55 10 W to 05 51 N, 55 10 W some time during the 1961-70 period.

Sara Leasowes:

This station was located in a village on the coastal plain at an elevation of 2 meters. It moved at an unknown date between 1961-70 from coordinates 05 54 N, 56 22 W to 05 54 N 56 24 W. The station was established in 1912 recording only rainfall.

STATION NOTES

SURINAM (con.):

Sipaliwini:

Station 81251 was an airstrip located on an open savannah on the leeside of a mountain chain. The elevation was 300 meters. It began operations in 1962 as a World Weather Watch Climatological station.

Stoelmanseiland:

Station 81209 was an airstrip located on a river island in a hilly terrain at an elevation of 53 meters. It was established in 1959 as a World Weather Watch Climatological station.

Tafelberg:

Station 81250 was located on a plateau in a mountainous area at an elevation of 344 meters. It was established in 1960 as a World Weather Watch Climatological station.

Zandery Airport:

Station 81225 was located near an inland village on an open savannah. The elevation was 16 meters. It was established in 1952 as a World Weather Watch Climatological station.

SWAN ISLANDS (1 station)

General:

Station name, elevation, and coordinates were obtained from archives at the National Climatic Center, Asheville, NC (United States).

Temperature:

Monthly mean temperature was calculated by one-half the sum of the mean maximum plus mean minimum values.

Precipitation:

Rainfall values represent the monthly total.

NEWARK PUBLIC LIBRARY

STATION NOTES

TRINIDAD AND TOBAGO (1 station)

General:

The station was still located at the International Airport even though a minor relocation of site occurred in 1962. Up to and including 1968, the observation hours used in computing means of temperature and sea level pressure were 0200, 0500, 0800, 1100, 1400, 1700, 2000, and 2300 local time. During 1969 and 1970, 24 hours per day were used in computing these means. All means were straight arithmetic averages.

Instrumentation:

1. Barometer was a Kew-Kern Mercurial.
2. Thermometers were housed in a standard Stevenson Screen at the recommended height above ground.
3. Rainfall was measured by a pot gauge. A Tilting-Siphon rain recorder adjusted the pot gauge. These met the WMO recommended exposure requirements. Rainfall was measured four times daily at 0200, 0800, 1400, and 2000 hours local time.

URUGUAY (13 stations)

General:

The station names, elevations, and coordinates given in the table headings were supplied by the General Directory of Meterology of Uruguay and were in use at the end of 1970. Thermometers and rain gauges were 1.5 meters above the surface at all stations.

Instrumentation:

Pressure was measured by a fixed Cistern barometer, Fortin barometer and barograph. Temperature equipment included maximum and and minimum thermometers, common thermometers, and thermographs. Precipitation was measured by a rain gauge and rain graph. Thermometers and rain gauges were 1.5 meters above the ground at all stations.

In addition, a wide variety of other meteorological measurements were taken at many stations.

STATION NOTES

URUGUAY (con.):

Pressure and Temperature:

The mean values at Montevideo/Prado were the average values of the 24 daily observations. At all other stations, the following equation was used:

$$1/10(0000+0300+0600+0900+1200+1500+1800+2100)h + 1/10(Max+Min)$$

where Max is the maximum daily value and Min is the minimum daily value.

Precipitation:

Values were obtained by totalling all measurable values above 0.1 millimeters. Rainfall was measured at 1100 hours GMT.

Barometer heights:

Station	Hp(m)
Colonia	15
Melo	95
Mercedes-Soriano	23
Minas	134
Montevideo/Prado Observatory	23
Paso De Los Toros	80
Paysandu	53
Punta Del Este	17
Rivera	259
Rocha	23
Salto	47
San Jose	42
Treinta Y Tres	58

NEWARK PUBLIC LIBRARY

STATION NOTES

VENEZUELA (16 stations)

General:

Station names, elevations, and coordinates given in the table headings were supplied by the Venezuelan Service of Metecrology and Communication and were in use at the close of 1970. WMO station numbers have been changed from the 1951-60 volume of this publication to reflect the current station network.

Rain gauge and thermometer heights were 1.4 meters and 1.65 meters above the surface, respectively. All daily precipitation values greater than or equal to 0.1 millimeters were taken into account. Monthly means of temperature and pressure were calculated by the equation:

1/4(0200 + 0800 + 1400 + 2000)hours local time

Precipitation was measured at 0800 hours local time.

CLINO values were taken from WMO NO. 117/TP 52.

Instrumentation:

Pressure was measured by a barograph and station barometer. Air temperature equipment included maximum, minimum, and surface thermometers, thermograph, hygrograph and ventilated psychrometer. Rainfall was measured by a rain gauge and rain graph.

In addition, a wide variety of other meteorological measurements were taken.

Station Histories:

Barcelona:

Station 80419 began as a precipitation station in 1921 and was located in the center of the city. It became a climatological station in 1939 but was discontinued from 1946 to 1949. In September 1954, this station was refounded as a synoptic station and moved to the airport 6 kilometers northwest of the city. In 1965, the observation site was relocated to the terrace of the terminal building 150 meters from the old location. Data between the old and new sites were corrected for this change. The barometer height was 7 meters.

Barquisimeto:

Station 80410 began in 1921 measuring only precipitation. It became a climatological station in 1930. This station was located in the Fuerzas Terrestres Quarters in the center of the city until 1949. In 1949 it was moved to the airport about 3 kilometers west of the old location. The observation site was moved 500 meters in 1964. Data were corrected for this last change. The barometer height was 614 meters.

VENEZUELA (con.):

Caracas-Maiquetia:

Station 80415 was founded in 1949 as a synoptic station. Instruments were located on a terrace at the Simon Bolivar International Airport. The observation site was relocated in February 1955 to an unknown height above the ground. Data were corrected for this change. The barometer height was 48 meters.

Caracas-Observatory Cajigal:

This station was founded in 1891 as a rain gauge station and became a climatological station in 1934. The instrument site was relocated 50 meters in 1955. The data were corrected for this change. The barometer height before relocation was 1042 meters and became 1035 meters.

Ciudad Bolivar:

Station 80444 began operation in 1921 recording only rainfall. It became a climatological station in 1935 and a synoptic station in 1949. This station was located in the center of the city with a barometer height of 48 meters.

Coro:

The station began in 1921 as a precipitation station and became a climatological station in 1930. In June 1949 it became a synoptic station and was relocated from the center of the city to the Coro airport, 1.5 kilometers north of the old location. The instrument site was moved 200 meters west in 1955 and the data were corrected. The barometer height was 17 meters.

Guiria:

Station 80423 was located at the Plaza inside the city. It was founded in 1939 as a climatological station and became a synoptic station in 1949. The barometer height was 8 meters.

Maracaibo:

Station 80407 began in 1931 measuring only rainfall. It became a climatological station in 1937 and a synoptic station in 1949. This station was located in the Fuerzas Terrestres Quarter until March 1958 when it was relocated to the Grano de Oro Airport. This was about 300 meters west of the old location with a barometer height of 65 meters. In 1972, it was relocated to the La Chinite Airport at coodinates 10 34 N and 71 44 W. This change will be reflected in the 1971-80 volume.

STATION NOTES

VENEZUELA (con.):

Maracay:

Station 80413 was founded in 1931 measuring only rainfall and became a climatological station in 1941. The location was in the center of the city in the Fuerzes Terrestres Quarter. In 1949 it became a synoptic station in the seat of the Meteorological Service and moved 500 meters east to coordinates 10 51 N and 67 15 W. The station was again relocated in December 1955 to the B. A. Mariscal Sucre. Data were corrected for this final move. The final barometer height was 437 meters.

Maturin:

Station 80435 was located in the Fuerzas Terrestres Quarters. It began as a precipitation only station in 1921 and became a climatological station in 1940. The station was reclassified as a synoptic station in October 1954 and moved to the Maturin Airport, 700 meters north of the previous location. Data were corrected for this relocation. The final barometer height was 66 meters.

Merida:

Station 80438 was located in the Fuerzas Terrestres Quarters. It was founded in 1921 as a rain gauge station although some data on rain exists from 1914. In 1945 it became a climatological station and in 1949 a synoptic station. The station was moved to the airport in 1955 about 3 kilometers southwest of the previous location. Data were corrected for this change. The final barometer height was 1498 meters.

Puerto Ayacucho:

No history was received for this station. Barometer height was 74 meters.

San Antonio Del Tachira:

Station 80447 began in 1942 at the Cuartel Army Quarters and measured only rainfall. Data were incomplete through 1945. It became a synoptic station at the airport, 5 kilometers northwest of the city at an unknown date. Small changes in observation sites occurred in 1951 and 1961 and the data were corrected. The final barometer height was 378 meters.

San Fernando De Apure:

Station 80450 was located in the Fuerzas Terrestres Quarters. It began as a rain gauge station in 1921 and became a climatological station in 1938. The station was moved 3 kilometers east in September 1955 to the airport. Data were corrected for this change. The barometer height was 48 meters.

STATION NOTES

VENEZUELA (con.):

Santa Elena De Uairen:

Station 80462 began in 1940 as a climatological station but with incomplete data. In August 1949, it became a synoptic station in place of the Civil Radio. The station moved in February 1954 to the National Guard Quarters. Data were corrected for this move. Final barometer height was 907 meters.

Tumeremo:

Station 80453 was founded in August 1949 as a synoptic station at the airport. The observation site was relocated 150 meters east in April 1961. Data were corrected for this move. Barometer height was 181 meters.

VIRGIN ISLANDS (4 stations)

General:

Station names, elevations, and coordinates were obtained from archives at the National Climatic Center, Asheville, NC (United States) and were in use at the end of 1970. All stations were part of the climatic network of the United States.

Temperature:

Monthly mean temperature was calculated by one-half the sum of the mean maximum plus mean minimum values.

Precipitation:

Rainfall values represent the monthly total.
